Connecticut Institute of Resilience and Climate Adaptation

Resilient Connecticut Summit
November 20, 2020
Presentation Overview

• Fundamental and Inalienable Human Right to a Clean, Safe and Healthful Environment?

• Disproportionate Impacts from Climate Change

• Modern Expansion of Public Trust Laws
Topic 1

Fundamental and Inalienable Human Right to a Clean, Safe and Healthful Environment?
Question

Aspirational Goal
or
Justiciable Right?
National Constitutions

- 149 out of 193 countries include explicit references to environmental rights and/or the central governments’ environmental responsibilities

- 96 out of 149 constitutions recognize that citizens have a substantive human right to live in a clean, safe and healthful environment (climate change litigation: Pakistan, Colombia; and Netherlands)

- U.S. Constitution is silent. No right to a clean, safe and healthful environment in the U.S. Constitution
Issue

Right vs. Privilege
March on Washington for Jobs and Freedom
(August 28, 1963)
Nexus Between EJ and CJ

According to the University of Colorado Boulder Environmental Center, Climate Justice:

“Climate change is fundamentally an issue of human rights and environmental justice that connects the local to the global. With rising temperatures, human lives — particularly in people of color, low-income, and indigenous communities — are affected by compromised health, financial burdens, and social and cultural disruptions. Those who are most affected and have the fewest resources to adapt to climate change are also the least responsible for the greenhouse gas emissions — both globally and within the United States.”

Constitutional Environmentalism

Climate/Environmental Justice

Good Environmental Governance

The Rule of Law

Compliance and Enforcement and the Development/Implementation of Policy

State Environmental Justice Law
State Environmental Rights Amendment
An ERA is an amendment to a state constitution giving the people a right to a "healthful" environment.

Differences in Amendments:

- Substantive Right vs. Policy Declaration
- Bill of Rights vs. Outside
New York

ERA: Art. 1, § 19 (11/21)

EJ Legislation: Art. 48 of ECL (1/1/20)

Climate Change Legislation: Climate Leadership & Comm. Prot. Act (7/18/19)
Topic 2

Disproportionate Impacts From Climate Change
Rhode Island

ERA: Art. 1, § 17 (1987)

Remediation Regs (Chap. 23 - 19.14)

Climate Change Legislation: Resilient Rhode Island Act (2014)
Climate Liability Litigation

Rhode Island v. Chevron

(filed 7/2/2018: notice of removal 7/13/18)
213. The State has incurred and will continue to incur expenses in planning, preparing for, and treating the public health impacts associated with anthropogenic global warming. Rhode Islanders are more likely to seek emergency on hotter days. On days when the temperatures reach 90°F, hospitalizations in the State for heat and dehydration increase 60% amongst those aged between 18 and 64, compared to the hospitalization rate on 80°F days. Climate models predict that ambient surface temperatures will increase by an average of 1.6°F by 2022, resulting in 378 more emergency department visits due to extreme heat in the months of April through October. Vulnerable populations such as the disabled, elderly, children, communities of color, and low income are more likely to suffer health effects from high temperatures. Increased prevalence of vector-borne diseases, increased pollution, and increased allergens caused by increased surface temperatures will further contribute to increased hospitalizations in the State.
Increased incidents of extreme weather have still more public health consequences, including danger to personal safety, economic disruption, and *population displacement*. As climate change impacts and severe weather events increase, they will place greater demands on emergency response and *sheltering services*. The Rhode Island Emergency Management Agency ("RIEMA") has already incurred costs to improve resiliency to future disaster through planning and preparedness activities, trainings, and adaptation programs.
218. The State has incurred significant expenses educating and engaging the public to better understand climate change, and promoting community involvement in actions to reduce climate change risks. These efforts include by educating vulnerable populations about the public health impacts of extreme heat waves (such as heat stroke), drought (diminished water supply), and other climate-related impacts. Implementation of these planning and public outreach processes represent substantial cost to the State.
89. Extreme weather events, such as hurricanes and inland flooding, have immediate health consequences, including danger to personal safety and long-term consequences, including social and economic disruption, population displacement, and mental trauma.

90. Extreme heat-induced public health impacts in the State will result in increased risk of heat-related illnesses such as heat exhaustion and dehydration, increased hospitalizations, and death.
Rhode Island v. Chevron

93. Public health impacts of these climatological changes are likely to be disproportionately borne by communities made vulnerable by geographic, racial, or income disparities.
Topic 3

Modern Expansion of Public Trust Laws
Modern Expansion of Public Trust Laws

- Groundwater is a public trust – Vt, NH, Conn, Hawaii, NJ, NM

- Air is \textit{not} a public trust resource - Oregon Supreme Court (Chernaik v. Brown and Oregon) (10/23/20)
Observations

ADDITIONAL TOOLS NEEDED

- EJ LAWS
- CLIMATE CHANGE LEGISLATION
- ERAs
- PUBLIC TRUST LAWS NEED TO BE EXPANDED/UPDATED – AIR MUST BE A NATURAL RESOURCE
“The only thing worse than being blind is having sight but no vision.”
